Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	29 September 2026
Team ID	SWTID-2026-7872
Project Name	Implement Client Script and UI Policy (Incident)
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Incident Form Configuration	Configure Incident form fields and identify the required Client Script and UI Policy conditions.
FR-2	UI Policy	Make Incident fields Mandatory, Visible or Read-only based on the configured condition.
FR-3	Client Script	Implement onLoad, onChange or onSubmit logic using g_form for dynamic Incident behavior and validation.
FR-4	Incident Validation & Testing	Test different Incident states and field values, validate submission, and confirm the expected form behavior.
FR-5	Deployment & Documentation	Review, deploy and document the Client Script and UI Policy configuration.

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	Incident form behavior should be clear and easy for users to understand.
NFR-2	Security	Client-side configuration must not expose sensitive information; access should follow ServiceNow roles and permissions.
NFR-3	Reliability	Client Script and UI Policy should behave consistently for the configured Incident conditions.
NFR-4	Performance	Form scripts and policies should execute efficiently without unnecessary delays or excessive client-side processing.
NFR-5	Availability	Incident form configuration should be available whenever the ServiceNow Incident application is available.
NFR-6	Scalability	The solution should support additional Incident conditions and fields with minimal configuration changes.
